

Making spatial data usable—an overview

■ Identify errors

SO02CN

■ Correct errors

SO03ED

■ Reconstruct topology

SO04BD

Identifying and interpreting errors

■ Dangling nodes

Attached to *one* arc
Drawn as squares

■ Too many labels

Arcs surrounding an area that contains more than one label

Draws all labels in the polygon with their IDs

■ Pseudo nodes

Attached to *two* arcs or a *loop*

Drawn as diamonds

■ Missing labels

Arcs surrounding an area with no label

Asterisk drawn at center of universe polygon

Topology and error detection

■ This relationship

Arcs connect by sharing nodes

Arcs are assembled clockwise into closed polygons

Polygons contain one and only one label point

■ Helps you detect this kind of error

Node errors

Unclosed polygons

Label errors
